Notes	The perfect entry-level Difalco controller, that will give you the same quality and the adjustments you need most.	With 30 bands and the flexibility of the resistor board, this is a controller that will give you years of good service.	With 30 bands and the flexibility of the resistor board, it also has Traction Control, which is a great feature (see DD304).	The Full Power and E.S.P. Brake relays bypass everything else in the controller to give you instant full power and braking.	Traction Control gives you more control in the twisty parts of the circuit, by lowering the voltage when the trigger is not fully depressed.
